

What Is Claimed Is:

1. A storage media having an information storage portion for storing information and an electronic circuit portion for processing the information,  
5 said information storage portion storing information to be used in an external system, and  
said electronic circuit portion including discrimination means for discriminating whether or not  
10 the external system is matched with the information stored in the information storage portion.
  
2. A storage media having an information storage portion for storing information and an electronic circuit portion for processing the information,  
15 said information storage portion storing a plurality of information to be used in an external system, and  
said electronic circuit portion including  
20 selecting means for selecting information stored in the information storage portion, and matched with the external system.
  
3. A storage media having an information storage portion for storing information and an electronic circuit portion for processing the information,  
25

said the information storage portion storing a plurality of information to be used in the external system, and

said electronic circuit portion including a

5 selecting means for selecting information stored in the information storage portion, and matched with a present state of the external system.

4. A storage media according to claim 1, wherein the  
10 external system is a personal computer system, and  
the information stored in the information storage  
portion is a system program.

5. A storage media according to claim 4, wherein the  
15 information storage portion or the electronic circuit  
portion further has information which allows the  
information stored in the information storage portion to  
be matched with the external system.

20 6. A storage media according to claim 5, wherein the information to be matched is an emulator of a system program.

7. A storage media according to claim 2, wherein the  
25 external system is a personal computer system, and

the information stored in the information storage portion is a system program.

8. A storage media according to claim 7, wherein the  
5 information storage portion or the electronic circuit portion further has information which allows the information stored in the information storage portion to be matched with the external system.

10 9. A storage media according to claim 8, wherein the information to be matched is an emulator of a system program.

10. A storage media according to claim 3, wherein the  
15 external system is a personal computer system, and the information stored in the information storage portion is a system program.

11. A storage media according to claim 10, wherein the  
20 information storage portion or the electronic circuit portion further has information which allows the information stored in the information storage portion to be matched with the external system.

12. A storage media according to claim 11, wherein the information to be matched is an emulator of a system program.

5 13. A storage media according to claim 1, wherein the external system is a computer system having a printer, and

the information stored in the information storage portion is a parameter for adjusting a print condition.

10

14. A storage media according to claim 2, wherein the external system is a computer system having a printer, and

the information stored in the information storage portion is a parameter for adjusting a print condition.

15 15. A storage media according to claim 3, wherein the external system is a computer system having a printer, and

20 the information stored in the information storage portion is a parameter for adjusting a print condition.

16. A storage media according to claim 1, wherein the storage media is an optical disk.

25

17. A storage media having an information storage portion for storing information and an electronic circuit portion for processing the information,  
said information storage portion storing  
5 information to be used in the external system, and  
said electronic circuit portion including  
notifying means for notifying an identifier of an information stored in the information storage portion to the external system.

10

18. A storage media according to claim 17, wherein the external system is a computer system for processing a digital image data, and the information stored in the information storage portion is a digital image data  
15 taken by a digital camera.

19. A storage media according to one of the claim 17, wherein the storage media is an optical disk.

20. 20. A computer system including a storage media having an information storage portion for storing information and an electronic circuit portion for processing information, and a computer capable of connecting the storage media,

said computer reading a system program and/or an emulator from the storage media, and pseudo-running a system program of a different computer.

5 21. A computer system including a storage media having  
an information storage portion for storing information  
and an electronic circuit portion for processing an  
information, and a computer capable of connecting the  
storage media,

10 said electronic circuit allowing to be read a  
system program suitable for the computer from the  
information storage portion and  
starting up the system program of the computer

15 22. A computer system including a storage media having  
an information storage portion for storing information  
and an electronic circuit portion for processing  
information, and a computer capable of connecting the  
storage media.

20 the computer system further including a printer,  
said computer reading a parameter for adjusting a  
printing environment from the storage media, and  
allowing to implement a printing suitable for the  
printing environment.

23. A computer system including a storage media having an information storage portion for storing information and an electronic circuit portion for processing an information, and a computer capable of connecting the  
5 storage media,

the computer system further including a printer, said computer reading an identifier from the electronic circuit and controlling a writing of the information stored in the information storage portion to  
10 the computer.

24. A computer system according to claim 20, wherein the storage media is an optical disk.

15 25. A computer system according to claim 21, wherein the storage media is an optical disk.

26. A computer system according to claim 22, wherein the storage media is an optical disk.

20

27. A computer system according to claim 23, wherein the storage media is an optical disk.
